

## **Notice of Public Meeting**

Milford Energy Advisory Committee/ Milford Community Power Committee  
[MEAC/MCPC]

**Date: 28 December 2023**

**Time: 5:30 p.m. - 6:30 p.m.**

**Place: Board of Selectmen's Chambers**

Agenda: consideration of the announced EVERSOURCE electrical power rate of \$0.0829 per kWh for electricity supply starting February 1 and extending to August 1. Further options for the MEAC/MCPC to pursue this year and the next.

This EVERSOURCE announcement is, seemingly, good news for Milford's families. A lower Electrical Power Supply Cost is wonderful. However it is only one part of our Electricity Bill. Two other major factors are the Transmission and Delivery rates [T&D] shown on your power bill. We should also try considering longer term opportunities to reduce costs for our Town.

What are the T & D costs compared to the same period to the previous years? Those costs are beyond private or public party except by the Public Utilities Commission [PUC].

The MEAC/MCPC will discuss the path forward with our Contractor, Standard Power of America, Mr. Bob Hayden, Ms. Emily Manns, Ms. Theresa MacDowell. Are lower Gas Rates likely to be available, which could make even lower Electrical Power Supply rates on the market? When might those prices be available to Milford residents?
